

McKESSON

McKesson is the country's oldest and largest health care organization, providing clinical, business and technology services that strengthen healthcare organizations and improve patient care – and touch the lives of millions of people every day. Currently ranked number 11 on the list of Fortune 500, the company acquires up to ten new businesses per year – an aggressive growth strategy that requires immediate and complete visibility into each system's vulnerability, risk and compliance status. By selecting Tenable SecurityCenter integrated with the Nessus vulnerability scanner, McKesson gained a rapid, centralized view of its vulnerability status across its complex global network.

Key Business Needs

McKesson needed a robust, scalable, and cost-effective vulnerability management system to pinpoint and prioritize vulnerabilities and risks and ensure, as well as ensure compliance of its acquisitions and integrated operations.

Tenable Products Selected

Tenable SecurityCenter™ integrated with the Nessus® vulnerability scanner, the industry standard, to gain a rapid, centralized view of vulnerability status across its vast global network.

Resulting Benefits

This enhanced security process streamlined compliance reporting and ensured auditors have visibility into the vulnerability status of newly-acquired and existing systems. As McKesson continues to grow by acquisition, Tenable's technology scales quickly and easily and helps the company continually identify and prioritize vulnerabilities and threats.
