

Based in Kingston, NY, Catskill Hudson Bank serves the needs of its business and consumer customers by blending dedicated customer service with a state-of-the-art banking network designed to be “the most advanced on the planet.” The financial institution sought a partner that could effectively and accurately protect its advanced network against vulnerabilities, ensure compliance with numerous regulatory examinations, regulations and standards, and produce custom reports. After first choosing another provider that couldn’t deliver, they selected Tenable — which did.

## Key Business Needs

Catskill Hudson must deal with the risk of cybersecurity issues, threats and attacks, while complying with numerous regulatory requirements and reporting relevant data to its executive team, Board and IT steering committee. It needed to secure its advanced network and sensitive data with trusted vulnerability protection and patch notification, reliable compliance auditing and customizable reporting. When another security provider’s security software produced false audit results under a tight deadline, the bank needed a new and better solution, quickly.

## Tenable Products Selected

In only eight days, Tenable helped the bank deploy a SecurityCenter® server, with a custom audit solution created by its engineers. Subsequently, the audit resulted in a perfect score, as well as the confidence that it was the solution the bank was looking for. In addition, Nessus® delivers scanning and audit capabilities that simplify and facilitate audits. The Tenable team’s quick and effective response, comprehensive capabilities and dedicated service convinced Catskill Hudson that it made the right choice.

## Resulting Benefits

In addition to providing an excellent audit score under deadline, SecurityCenter delivers trusted reliability and stability. It automates and simplifies the creation of custom reports for different stakeholders, and presents technical information to a non-technical audience in clear and understandable language. In addition, Nessus scans make audits routine, and auditors know and trust the Tenable products’ name and reputations. The products are backed by the Tenable team’s ongoing technical support, which provides assistance every step of the way.
