

JUST EAT

Hungry? If you live in any of 15 countries, you can have a restaurant meal delivered to your door, thanks to London-based JUST EAT, the world's leading online and mobile takeaway ordering service. The growing company needed a scalable security program with total visibility into the IT environment, which is distributed globally and includes internal systems, cloud applications and millions of users. Tenable provided JUST EAT with a menu of solutions to fulfill its security needs.

Key Business Needs

Headquartered in England, JUST EAT is the world's leading provider of online and mobile takeaway services. The company continues to expand rapidly, so it needed a comprehensive and scalable custom security program with better visibility to provide protection in an ever-changing and sophisticated threat landscape.

Tenable Products Selected

JUST EAT selected SecurityCenter CVTM, which provides one security platform with customized, easy-to-use dashboards that enable visibility and automate understanding of its high volume of data and assets. JUST EAT also chose Tenable for its "stellar" support, which provides an invaluable extension of its in-house security team.

Resulting Benefits

Tenable provided holistic visibility of large volumes of data and critical context, empowering JUST EAT to take decisive action and make better business decisions. As a result, new acquisitions integrate seamlessly, and Automated Report Cards enable automated reporting to management. In addition, dedicated customer support from Tenable experts extends the IT team's capabilities and productivity.
